

Construction of LNG jetty

No changes for dumping site

No monitoring for impact on cherry and chum salmon at all

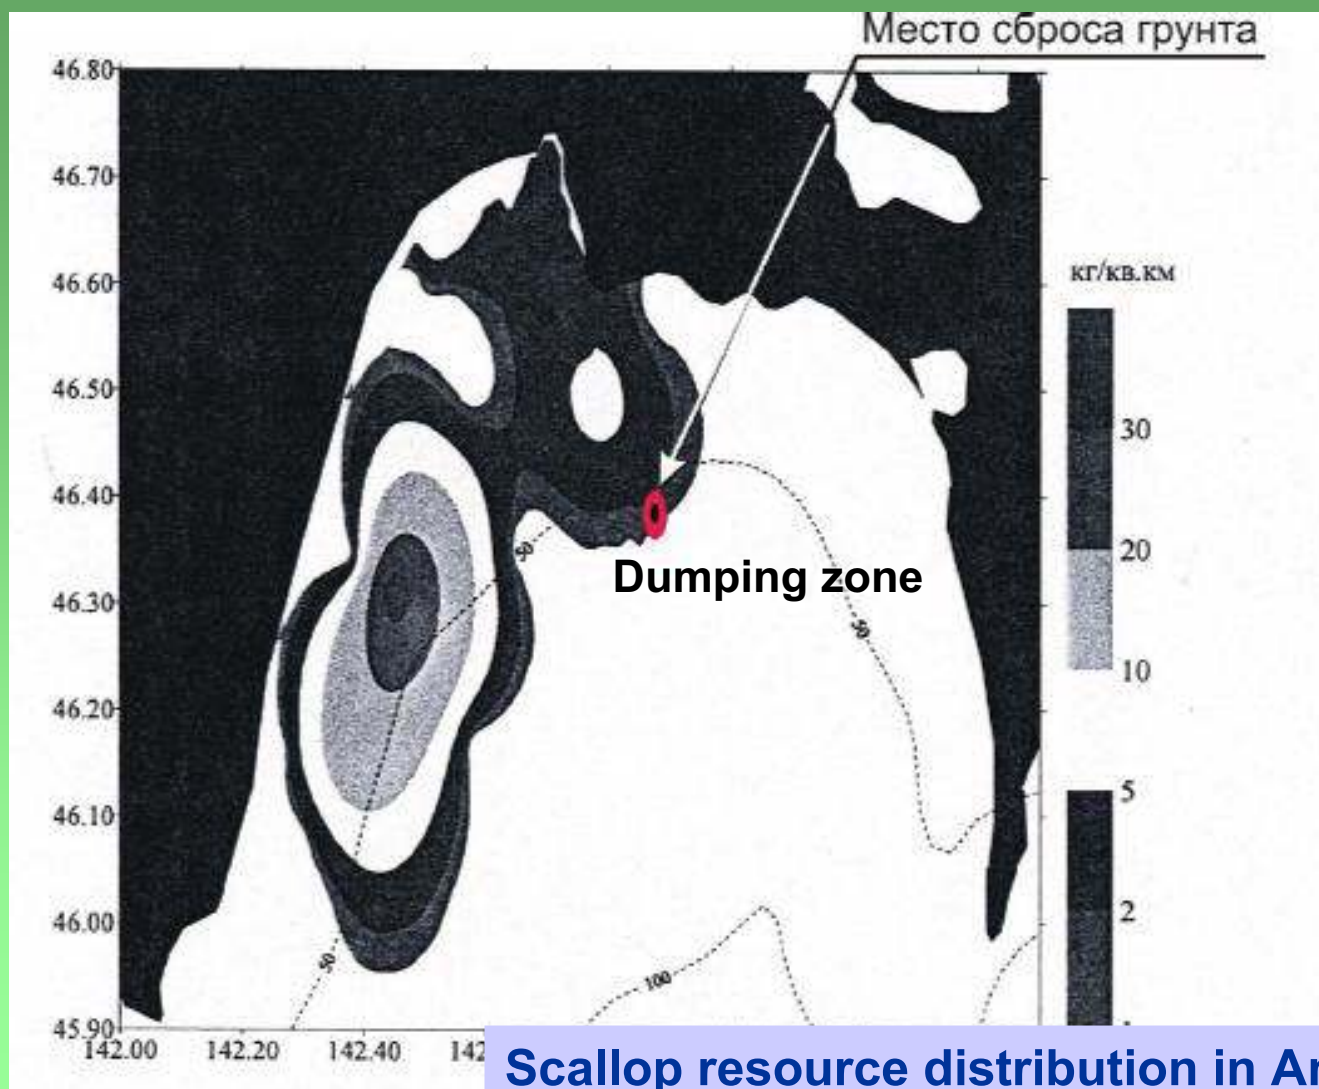

Construction continues during salmon spawning season (cherry, pink and chum salmon)

Total volume of dumped dredged material is 471 333 m³ at the end of dumping
According SEIC's data, 219 131 m³ remains in dumping zone, which means
252 202 m³ was spread among the Aniva bay

June 01, 2005

**Local fishermen and people witness –
scallop is completely disappeared from beaches**

Sakhalin Environment Watch

In the past it was possible to collect scallop on beaches
Total amount of collected scallop reached tens of tons after strong storm

Scallop collection is livelihood and an important part of our lifestyle

August 17, 2003

Remaining volume of dredging is about **2,000,000 m³**
What will be with our remaining resources in Aniva bay,
when it will be dumped during next few months?

September, 2004

Salmon catch of Kalipso company decreased from 1,500 tons in 2003 to 365 tons in 2005

**Dredging will continue around operating area of Aniva bay – immediately adjacent to mouth of the very important spawning Mereya river
Huge long term impact on Aniva bay marine resources is guaranteed**
