

The next tributary – Ozernaya river:

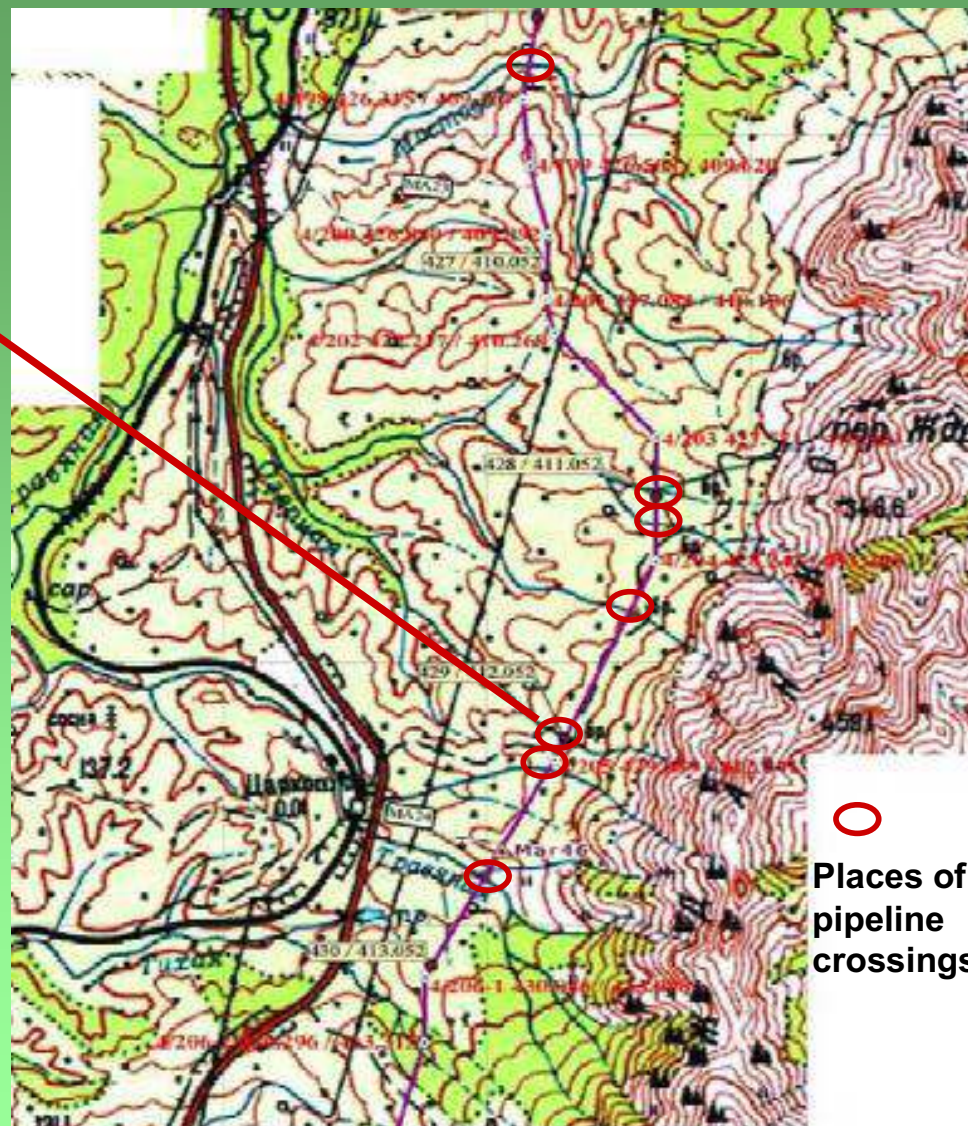

This deep trench was dug-up, just to provide convenient conditions for construction work

As a result, small waterfall has appeared

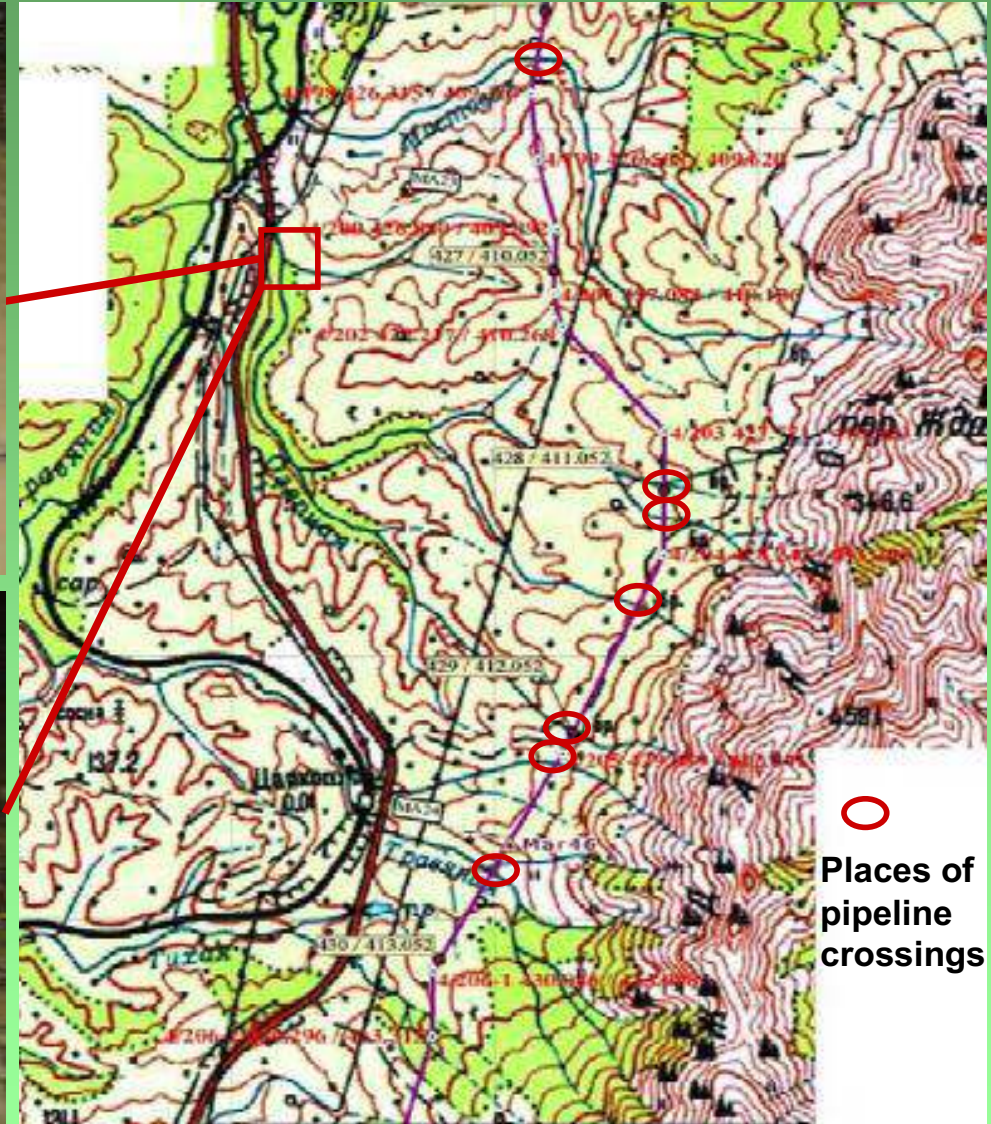

Vehicles move across the stream continuously

Ozernaya river crossing

The result several km downstream on the Ozernaya river

**How wild salmon spawning river should look
(the river, untouched by pipeline)**

Sakhalin Environment Watch

Scientific researches say:

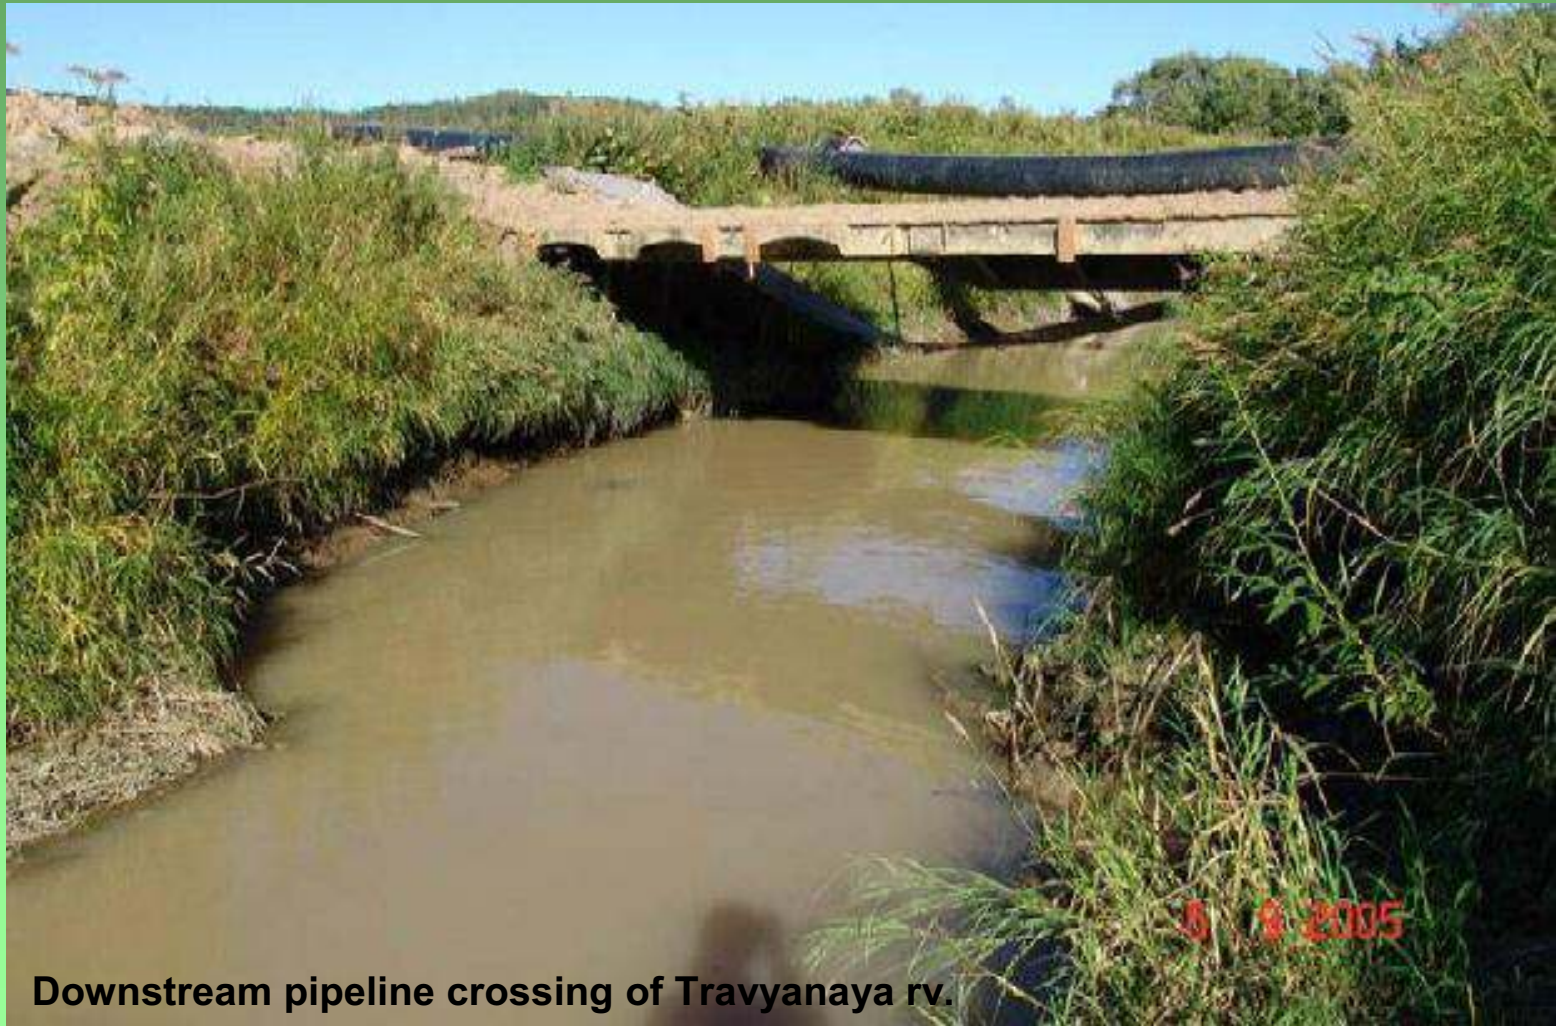

salmon can swim up rivers with high content of suspended solids, but cannot spawn in water with suspended solids content 220 mg a liter and higher

Ozernaya river,
several km
downstream of
pipeline crossings:

females died
before laying eggs

Travyanaya river about **14 km** down from upstream pipeline crossing with a very high content of suspended solids (SEIC's EIA says – 100 m downstream of river crossings all suspended solids settle and water becomes completely clean)

Downstream pipeline crossing of Travyanaya rv.
